

ab anno 1868 cognita)

Vrunc primum et gravi damno in Europam importata. Oogonia ignota.  
Conidia stipeoidea, basi apiculata, 22-25 = 15-17, potius ob-  
vases-brunnea mihi visa, quam rotacea, et habet d. Humphrey.

5 Caecoma pulcherrimum Bubak in Bot. Centralbl. 1903, n. 38, p.  
305, D. Sacc. Myceth. ital. n. 1268.

Hab. in foliis caulibusque Mercurialis annuae, Avellana, Apr.  
1903, ubi legi cum genere meo prof. Traber. An status acci. Datis;  
Melampsorae cujusdam?

6 Aecidium Ranunculacearum DC. - Syll. fung. VII, p. 476 - var.

Aecium Travers. in D. Sacc. Myceth. ital. n. 1264. A typo. mox differt  
habitatione fungorum in Lemnibus foliorum et quia matricem maxi-  
me deformat.

Hab. in caulibus, petiolis pedunculisque Ranunculi bulbosi subsp.

Aecium, in horto botanico Patavino, Majo 1903. Interdum adest  
sociis Urocystis Anemones.

7 Ustilago Maydis (DC.) Corda - Syll. fung. VIII, p. 472 - forma  
androphila D. Sacc. Myceth. ital. n. 1270.

Hab. in panicula mascula Zea Maydis, Salva (Treviso) Aug. 1903.

Hac ducenda Ustilago Reichenii <sup>Traver</sup> Cugini (1890) et Rothareale (1902) nec  
Patavini. Cf. Traversi in Annal. mycol. I p. 303, cum ic.

8 Ustilago ruda (Jens.) Kell. et Sw. - Syll. fung. IX, p. 283, D. Sacc.

Myc. ital. n. 1274, Dielet in Pflanzenfam. Fungi, II p. 7, fig. 4, G.

Hab. in specie Hordei vulgaris, quod late vexat, Campodolano  
(Sondrio), alt. 1500 m., Aug. 1903 (Doct. J. B. Traverso).

10 Sphaerotheca lomentosa Ooth - Syll. fung. XIV p. 462, D. Sacc. My-  
ceth. ital. n. 1280.

Hab. in caulibus adhuc vivis Euphorbiae platyphyllae, Salva (Tre-  
viso), Julio 1903 (Antonia Sauardo). Species nova pro flora italiana.

11 Sphaerella Phoenopari Auersw. - Syll. fung. I p. 522 - var. Romana

Sacc. Puncta minor, perithecia conoidea, prominentia, 160-180  $\mu$  D.;  
asus obclavatis, 50-60 = 4-15; sporidia distichis v. oblique monostichis,  
breve fusoides, utrinque obtusius, 18-20 = 5-5,5 ad septimum non contractis.  
Hab. in foliis moribundis Romulae Bulborodii in agro Romano  
(Doct. A. Séguinot)

12. Sphaerella Runicij (Desm.) Cooke - Syll. fung. I p. 512.

Hab. in foliis Runicum, Avellino, Apr. 1903 - Ovis caprae  
Runicij, 55-65 = 12-14; sporidia oblique monosticha obovata, bas.  
acutiuscula, 15,5-16 = 7-7,5, dilata chlorino-olivacea. St coloris  
hujus characterem ad Pheosphaerellam mutat.

13. Sphaerella gargarica Sacc. sp. n. - Peritheis: hypophyllis, hinc inde  
dense gregaris, punctiformibus, leviter prominentibus, globulosis, 150-180  $\mu$   
diam., contextu densiusculo, parvicelluloso, atro-fulgineo, poro mi-  
nuto vix papillato, dein lacerto; asis rosulatis, crassa clavatis, sub-  
sessilibus, apice obtuse rotundatis, 35-40 = 11-14, octosporis, apara-  
physatis; sporidiis subhispidibus oblongis, saepe parvis crassis, con-  
vexis, utrinque obtusis, 11-12 = 3-3,5, rarius usque 4  $\mu$  ex., hyalinis, e-  
guttulatis.

Hab. in foliis Smilacis asperae var. mauritanicae pr. S. Mian-  
do Gargarica (Foggia) Majo 1893 (U. Martelli).

14. Pheosphaerula Bropani Paltacci - Syll. fung. XVI, 584, D. Sacc. Mycolth.  
Ital. n. 1290.

Hab. in foliis languidis Medicaginis sativae, Selva (Trevise) Aug.  
1903 (Antonina Savardo).

15. Pyrenophora trichostoma (Fr.) Fackel Sacc. Syll. fung. II p. 318, Persl.  
Syll. fung. II, p. 34, t. 48.

Hab. in culmis graminum emortui, Avellino, Apr. 1903.

17. Autographum anaxaceum Sacc. sp. n. D. Sacc. Mycolth. Ital. n. 1314.

Peritheis hinc inde laxae gregaris, minus, exiguis, oratis, oblon-  
gatae, convexae, minute longit. striatae exaratae, 250-300 = 100,  
superficialibus, contextu tenui; asis clavatis, brevissime papillatis,  
apice rotundatis, 30-40 = 9-11, pleiformi-paraphysatis, octosporis;  
sporidiis oblique monostichis v. distichis, tereti-clavatis, abaeque  
obtusis 1-septatis, leviter contractis, lamula inf. angustiore, 2-gutta-  
tis, 9-10 = 4-4,5, hyalinis.

Hab. in foliis emortuis Carricis sp. ad fl. Piave (Anaximum)  
Nervesa (Trevise) Aug. 1903.

- 18 Malitiosporium hystericum (Fr.) Gill., *Syll. fung.* VIII, p. 704.  
 Hab. in ligno quercino aeri divi exposito al Gombo pr. Pisa,  
 Mart. 1899 (U. Martelli), socij Torula antennata f. minor  
 et Belotia citrina - Asci tereti-clavati, apice rotundati, beni-  
me stipitati,  $75-80 = 14-15$ , <sup>hififormi</sup> paraphysati, 2-4-spori; spori di-  
ellipho-oblongi,  $25-30 = 11$ , saepe leviter inaequilateri, typice  
7-septato-clathrati, subhyalini, non contracti, loculis guttulatis.
- 19 Pyrenopeziza (Geasterina) californica Sacc. sp. nov. - Ascoma  
lobis in caule late demigrato superficialibus, late gregarij,  
cyathiformibus, brevi contractis, intus extrinsece nigris, platis, <sup>leni</sup> membra-  
naceis, socij ore involuti ureolatis, <sup>angulatis striatis</sup>  $\frac{1}{2}$  -  $\frac{1}{2}$  um. diam., margine  
corpore in lacinijs, <sup>acutus</sup> plures, <sup>satis profunde</sup> retundati, exapulo ex cellulis  
parenchymaticis, parallelis, septatis, plagiatis  $5-6 \mu$  et in lacinijs  
defluentibus, contorto; asis <sup>rectis</sup> clavatis, brevi ternati-stipitati, apice  
rotundatis,  $56-62 = 5,5-6,5$ , octosporis; paraphysis filiformibus apice  
decuratis; spori di- monostichis, obovato-ellipsoideis, deorsum alternatis,  
continis, hyalinis, eguttatis,  $9-12 = 3,5-4,5$ .
- Hab. in caute emortuo Lini Lewisii Mt. Eddy Siskiyou Co.  
California, Sept. 1903. legit E. B. Copeland, communicavit H.  
Sydow. Ob marginem distincte radiatum laciniatum foris  
 non generis typus (Geasterina); foris Pyren. fractae <sup>(R. et C.) Sacc.</sup> affinis speci-  
Cellulae senectae exapulo videntur <sup>ubi non</sup> hyphae inter se conglutinae.
- 20 Ceratostoma juniperinum Ell. et Ev., *Syll. fung.* IX, p. 481,  
 D. Sacc. *Mycoth. ital.* 4. 1297.  
 Hab. in ramis Juniperi communis, quae inde tumescunt, Frède  
(Freye) aetate 1902 (Paq. Bavariae). A specie americana  
 non videtur satis diversa.
- 21 Siderium effusum (Link) Fr. - *Syll. fung.* VII, p. 778  
 Hab. ad folia dejecta Oleae europaea, pr. Empoli, Oct. 1885  
 (U. Martelli). Hunc et sequentes Mycomyces determinavit Doct. Don.  
 Saccardo
- 22 Chondroderma globosum (Pers.) Post. - *Syll. fung.* VII, p. 370  
 Hab. in fungo Magnoliae in horto bot. florentino, Jan. 1892  
 (U. Martelli)

1791

- 22 Arzryna cinerea (Bull.) Pers. - Syll. fung. VII. p. 427. Arc. alb. da Pers. (1794),  
ister Mycatz. p. 186  
Hab. ad ligna putrida in horto Boboli, Firenze, 1895 (U. Martelli.)
- 23 Hemitrichia rubiformis (Pers.) Scl. Mycatz. p. 115, Hemiarzryna Pers. - Syll. fung. VII. p. 427  
Hab. ad ligna putrida in horto Boboli, Firenze, 1895 (U. Martelli.)
- 24 Trichia varia Pers. - Syll. fung. VII. p. 442  
Hab. ad cortices putres in horto Boboli, Firenze 1895 (U. Martelli.)

Deuteromyces.

- 25 Phylosticta cicerina Pott. & Talac. - Syll. fung. XI. p. 418 - f. caudicola  
Hab. in caulibus Ciceris arachini, quod valde vixat, Radda per.  
Florentiam Jan. 1880 (O. Pezarij). Sporulae continuas, brevissime  
sphaericae, oblongae, utrinque rotundatae, 10,5 - 11,5 = 5 - 5,5, obsolete  
guttatae, hyalinae
- 26 Phoma Cucurbitacearum (Tr.) Sacc. Syll. III. p. 148 - f. Trichosanthis  
Hab. in epicarpio putrescenti Trichosanthis colubrinae cultae in  
horto botanico Palavico, Oct. 1903 - Sporulae ellipsoideae, 6-7 = 3,  
guttatae, hyalinae; basidia acicularia, 20-25 = 2 a thalamis  
ochraceo-pulveraceo ornata; peritheia creberrima.
- 27 Cytosporella sphaerosperma (West.) Sacc. Syll. fung. III. p. 252  
Hab. in cortice doliore quercum prope Florentiam, Jan. 1894 (U.  
Martelli) - Sporulae proboscatae, globosae, 2-3 mic. diam. sub  
polysticho-plurilocellatae; sporulae globosae, 3-4 mic. diam., hyalinae;  
basidia filiformia 16-20 = 2. C. pyriformis affinis.
- 28 Ascochyta Arunci Sacc. Sp. n. in D. Sacc. Mycol. ital. n. 1324.  
Maculis concoloris orbiculari-sinuosis, albicantibus, margine angusto  
subelevato concolori cinctis; peritheis laxe gregaris, pumili-formibus,  
injecantibus, a globosis, orbiformibus, 250-300 mic. diam., poro rotundo perfur-  
to; contenta minute cellulosa, circa porum densiore; sporulis tereti-clavulatis,  
utrinque obtusis, 6,5-7 = 2, medio leviter contractis, distinctum chloris.  
Hab. in caulibus adhuc viventibus Spiraeae Arunci, Selva (Treviso)  
Aug. 1903 (Antonina Saccardo)

- 29 Diplomitella Donacina Sacc. <sup>Fr. n.</sup> in: *S. Sacc. Mycolth. ital. n. 1345* —  
 Peritheis, *Tenax* v. *laxe gregaris*, basi adnata superficialibus,  $\frac{1}{3}$  —  $\frac{1}{4}$  mm.  
 diam., e globosa acutiuscula conoides, nigri, membranaceo-carbo-  
 raceis, sporiis obovato-oblongis, 18-20 = 6, deorsum acutiusculis,  
 1-septatis, non v. vix constrictis, fuliginosis, bordis non observatis.  
 Hab. in caulibus emortuis Arundinis Donacis, Selva (Treviso)  
 Aug. 1903 — A. Spl. arundinacea et D. Meydii propter peritheia  
 superficialia differt sporularum magnitudine diversa.
- 30 Leptothyrium Spaggiarianum Sacc. et Trav. sp. nov. — Perithe-  
 is, ianato-pinnatis, amphigenis, sparsis v. laxe gregaris;  
 0,5 — 1 mm diam., dioides, demum depresso, ambitu orbicula-  
 ribus, nigri, demum irregulariter v. rimose schiscentibus; con-  
 texta parum distincta et <sup>paucis</sup> ab epidermide atrata; sporiis copiosis,  
 oblongo-ellipsoideis, abique retundatis, 4-5 = 2,5, obsolete  
 punctatis, hyalinis.  
 Hab. in foliis <sup>emortuis</sup> Wongni japonici, Conegliano, Oct. 1876 (C.  
 Spaggiari).
- 31 Dicoma blwana Sacc. sp. n. — Peritheis gregaris, disformiter,  
 superficialibus sed non sedentibus, 250-300  $\mu$  diam., nigri, center  
 portibus et hemisphae papillatis, membranaceis; contexta nullo albi-  
 coso, subtridato, ambitu non fimbriato; sporiis fusoides, curvatis,  
 12-15 = 2,5-3, obsolete 3-septatis, non constrictis, ex hyalina  
 plurilima flavidis, minute subulatis, <sup>attingit</sup> sub apice setula 9-11 = 0,5,  
 hyalinae auctis.  
 Hab. in caulibus emortuis (Crepidis?), Selva (Treviso), Sept.  
 1903 (Antonio Saccardo). Peritheis nunquam rugoso-plicata.
- 32 Melanconium Desmazieri (B. et Br.) Sacc. *Syll. fung. III* p. 757  
 Hab. in ramis corticatis Vibae (ut videtur), Firenze, Apr.  
 1901 (U. Martelli)
- 33 Merosma Juglandis (Lib.) Sacc. *Syll. fung. III* p. 768  
 Hab. in foliis Juglandis regiae, Cammarata, <sup>(Syracusa)</sup> Sicilia, Nov.  
 1901 (U. Martelli)

- 24 Sporobolus sulphureus Griseb. - Syll. fung. IV p. 102.  
 Hab. in pulvere zeina putrescente, Novanta Padovana, Junio 1903  
 (Fuct. Boreolo) - Conidia perfecte globosa 3-3.5  $\mu$  diam., laevia, sulphurea;  
 hyphae ramulosae, septatae, 2,5-3  $\mu$  crassa.
- 25 Ramularia Geranii (West.) Fuct. - Syll. fung., IV, p. 204.  
 Hab. in foliis Geranii pratensis, M. Baldo Sept. 1890 (U. Martelli)  
 Conidia raris usque 26  $\mu$  longa.
- 26 Pyrenopeziza pusilla Sacc. - Syll. fung. IV p. 343, Fung. ital. tab. 21.  
 Hab. in lignis dejectis geranii, in horto Boboli, 1895 (U. Martelli)
- 27 Clasterosporium tenuissimum (Nees) Sacc. Syll. IV p. 393.  
 Hab. in corollis Xanthi Caryophylli culti, cui maximum totalem  
 abilit aestate 1903, in horto Herb. Neapoli, <sup>(Antonio Pizzato)</sup> hyphae steriles  
 repentes septatae, dilute olivaceae, 4-5  $\mu$  cr., hinc rade ramulosa  
 hinc v. furcata, breves emittentes; conidia obclavata, 60-80-77  
 sursum <sup>compresse</sup> seminata, palea dora, basi rotundata, 4-5- raro usque  
 7-septata, non contracta, olivacea. <sup>foliois</sup> affines sunt Clasterosporium  
 putrefaciens (Fuct.) Sacc. et Polydorum exilius Kiehn valde gurgu  
 nociva noxiale.
- 28 Cercospora Traversiana Sacc. sp. nov. in J. Sacc. Mycol. it. n. 1390.  
 Maculis amphigenis rotundatis v. semicircularibus usque 1 cm.  
 latis, umbino-fulvis, immarginatis; caespitibus amphigenis, in  
 pag. sup. ut plurimum copiosis, compactis, minutis;  
 hyphis conidiphoris brevibus, 30-40 = 3,5-4,5 <sup>laevia demiculatis</sup> <sup>(bimultiplicibus)</sup>, conti-  
 nuis, lutes-pubescens sursum subhyalinis; conidiis acrogenis,  
 aircularibus, sursum alternatis, rectis curvulisque, primo con-  
 tinuis, dein 3-5-septatis, 80-125 = 3, hyalinis.
- Hab. in foliis vivis Tigonellae Foeni-graeci cultae in horto  
 botanico Patavino, Junio 1903. R. C. herbola Sacc. Differt ma-  
 culis majoribus, caespitibus plerumque epiphyllis, hyphis non septatis  
 et.
- 29 Maurosporium Nelumbii M. et Ev. - Syll. fung. XI, p. 654.  
 Hab. in foliis, quae maculantur et demum exsiccantur  
 Nelumbii speciosi culti in horto botanico Patavino <sup>Sept.</sup> Oct. 1903,  
 socio Epicocco vulgaris Corda.

Oncopodium Sacc. n. gen. (Ety. oncos tumor et podion pediculus)  
 hyphae steriles brevissimae, h. e. tratum proferum soranthum formantes,  
 et basidia con. 8 spora immedie gignentes. Basidia laxe fasciculata,  
 contorta filiformia sub conidia conspicua vesiculata-tumentia, hyalina,  
 apice unispora. Conidia subglobosa, pluriseptata-dactylata, ful-  
 ginea, utrinque laterales (sec. apice) in apiculum conicum <sup>subhyalinum</sup>  
 producta. Ob basidia apice vesiculosa Stemphylium inflatum in  
 memoriam revocat sed basidia simpliciter, conidij laterales apiculati,  
 omnia differt. In systemate <sup>propria</sup> Sporodochium locandum genus.

40 Oncopodium Antoniae Sacc. et D. Sacc. sp. nov. - Conidij nunc  
 in gregez punctiformes approximatis, nunc dispersis, laevae directae ab-  
 mitentibus, supero-paulibus, globosis v. transversa ellipsoideis, nunc 16-20  
 $\mu$  diam., nunc 19-20 = 13-14, imitio parca dactylata, <sup>subhyalina</sup>  
 mox dense murali v. radatum dactylata, fuliginosa, <sup>(apiculis laterales, conidij 3-5  $\mu$  diam.)</sup> basidia simpliciter,  
 v. rarius e bas. furcata, <sup>hyalina</sup> 40-50  $\mu$  longis, a medio sursum ovoides-inflata,  
 ibique 14-15  $\mu$  cr., inferioris 2  $\mu$  cr.

Hab. in ramis siccis contractis Berberidis vulgaris, Montello (Trento)  
 Julii 1903, sociis Cucubitaris Berberidis legit Antonia Saccardo, <sup>diata sparis.</sup>  
 cur. merito ✓

41 Styrenium atro-velutis Sacc. sp. n. - Gregarium in areis culmi dealbati,  
 minutis,  $\frac{1}{4}$  mm. altis; stipite crassiusculo cylindrico, albidis, ex hy-  
 phis filiformibus, 2-2,5  $\mu$  cr., septatis, <sup>hyalino</sup> subolivaceis compactis; capi-  
 tulo sphaerodes, glabro, atro-veluti, cir. 100  $\mu$  diam.; conidij ex apice  
 tortuoso hypharum orientibus, laevae calculatis, bene fuscois, 2-guttatis,  
 6 = 2,5, olivaceis. (Antonis Saccardo)

Hab. in culmis subvitis Brachypodii, Montello (Trento) Aug. 1903 ✓

42 Dendrodochium minusculum Sacc. sp. nov. Sporodochij immixtissimis, ina-  
 equalibus, confluentibus et tunc maculae varieg fere archedonaeae, rosaeae  
 formantibus; hyphis sterilibus, obovatis, festibus cylindricis apice 2-3-fidis,  
 18-20 = 2,5, ascendentes; conidij subglobosis, exiguis, 2,5 & 2,  
 subhyalinis, fuscis.

Hab. in palis putrescentibus, alle Cascine Firenze, Febr. 1892 (H. Mar-  
 telli) Dendrodochio affini Sacc. proximum.

43 Ectostroma Sileny D. Sacc. Mycol. ital. 4. 1400 - Maculiformis, vitaceo-  
 grim, lamidulum; maculis suborbicularibus 2 mm. diam.  
 Hab. in foliis reticulatis, vivis Sileny putantibus, Montello (Trento) Aug. 1903.  
 Veritatem utrum utrum juvenile Dicomyces capissum. 37/0028-2
