# University of Vienna Metadata

**Title (ger):** Universität Wien Metadata

**Title (eng):** University of Vienna Metadata

**Alternative Title:** UWmetadata

**Identifier:**

**Creator:** Universität Wien

**Contributor (editor):** Lorisa Andreoli, Cristiana Bettella, Linda Cappellato, Yuri Carrer, Gianluca Drago, Giulio Turetta

**Rights Holder:** Universität Wien

**Publisher:** The University Library Centre. University of Padova

**Date created:** 2006

**Date issued:** 2019-07-26

**Status of document:** Closed

**Related to:** 1484.12.1-2002 IEEE Standard for Learning Object Metadata (abridged LOM)

**Description of document:** The following is the revised version of UWmetadata schema, the conceptual data model created by the University of Vienna to specify what characteristics of a digital object may be described and how these characteristics should be recorded. UWmetadata is the result of the expansion of the IEEE Learning Object Metadata (LOM) standard (IEEE 1484.12.1-2002), and the combination of elements of different metadata namespaces, which place this schema among the examples of Application Profile (AP). Similarly to LOM schema, it has a hierarchical tree structure composed of thirteen semantic wraps, or categories, which include distinct elements. For each category, elements and sub-elements comprised, the mandatory level [M] of usage in the Phaidra repository at the University of Padova is highlighted, and the visualisation of the hierarchical structure is maintained as reported in column “Description”. A brief explanation and an example are also provided, and LOM reference is always specified as well.

## RELATIONS | RELAZIONI

**PHAIDRA RELATIONS** – The types of relationships supported by PHAIDRA are not encoded in the UWmetadata source scheme. Note that in the metadata profile PHAIDRA\_DublinCore they are all coded as an unrefined element dc:relation with the exception of the relation hasPart representing the inclusion of the collection object-members. E.g.: Collection  $\ni$  Object (hasCollectionMember  $\rightarrow$  hasPart. See: PHAIDRA\_DC Metadata Element Set Version 1.1 (2018) [http://phaidra.cab.unipd.it/static/phaidra\\_dcmetadata-element-set.pdf](http://phaidra.cab.unipd.it/static/phaidra_dcmetadata-element-set.pdf).)

<b>hasCollectionMember:</b> one-to-one relationship used to define the relation of inclusion of a collection of objects and the relationship of belonging of the objects as members of a collection – See: fedora / fedora-system: DEF / External relations - # hasCollectionMember
<b>references:</b> a related resource that is referenced, cited, or otherwise pointed to by the described resource. In Phaidra context used to connect two objects in a generic way – URI: <a href="http://purl.org/dc/terms/references">http://purl.org/dc/terms/references</a>
<b>isBackSideOf:</b> used to represent the relation front side/back side (recto/verso) of the described resource. For instance, if a picture is scanned from both sides, you can use this relation to connect the described resource representing the back side of the picture to the 'front side' related resource – URI: <a href="http://phaidra.org/XML/V1.0/relations#isBackSideOf">http://phaidra.org/XML/V1.0/relations#isBackSideOf</a>
<b>hasSuccessor:</b> a related resource that is the newer version of the described resource – URI: <a href="http://phaidra.univie.ac.at/XML/V1.0/relations#hasSuccessor">http://phaidra.univie.ac.at/XML/V1.0/relations#hasSuccessor</a>
<b>isAlternativeFormatOf:</b> a related resource, that is substantially the same as the described resource, but is in an another format – URI: <a href="http://phaidra.org/XML/V1.0/relations#isAlternativeFormatOf">http://phaidra.org/XML/V1.0/relations#isAlternativeFormatOf</a>
<b>isAlternativeVersionOf:</b> a related resource of which the described resource is a version, edition, or adaptation – URI: <a href="http://phaidra.org/XML/V1.0/relations#isAlternativeVersionOf">http://phaidra.org/XML/V1.0/relations#isAlternativeVersionOf</a>
